PROJECTS

NSTP Digital Management Platform

Technologies: PERN Stack (PostgreSQL, Express, React, Node.js)

- Developed a centralized NSTP system to replace manual academic processes, streamlining enrollment, classification, and module delivery
- Implemented role-based access and municipality-based assignment, improving system organization and user management
- Built dashboards and reporting features (PDF/Excel) to centralize data visibility, enhancing monitoring and decision-making

Fruit Quality Detection using YOLOv8

Technologies: YOLOv8, Python, Computer Vision

- Developed an image-based classification system to replace manual fruit inspection, achieving ~96% accuracy in detecting fresh vs rotten apples
- Augmented and preprocessed image datasets to handle variations in lighting and occlusion, improving model robustness on unseen data
- Optimized training using k-fold validation and early stopping, reducing overfitting and improving generalization performance

TaskPro – DOST Biliran Project & Proposal Management Platform

Technologies: TensorFlow, Flask, D3.js

- Developed a full-stack platform using Django and React (TypeScript) to address fragmented DOST project tracking, streamlining proposal management, reporting, and collaboration
- Implemented budget monitoring and GIS-based visibility features to improve oversight, enhancing transparency of project status and resource allocation while automating document workflows and reporting processes.

EXPERIENCE

Software Development Center – University of Da Nang, Vietnam

March 2026

Intern

Da Nang, Vietnam

- Applied Python and SQL to clean and analyze datasets for development tasks, improving data usability and accuracy
- Collaborated in code reviews and Agile discussions to address technical issues, enhancing team workflow efficiency
- Contributed to software development tasks in a fast-paced environment, strengthening practical engineering and data skills

HABI Space – Biliran Province State University

January 2026 - Present

Intern

Naval, Biliran

- Collaborated in a team-based environment to develop system workflows, improving coordination and feature delivery
- Implemented backend APIs and frontend components to support platform functionality, enhancing system usability
- Participated in iterative development and testing processes, improving system reliability and performance

Academic Research (Freelance)

Apr 2024 – Present

Freelance

Naval, Biliran

- Analyzed research materials and data to extract key insights, improving the quality and structure of academic outputs
- Managed multiple projects under tight deadlines, strengthening organization and time management

EDUCATION

Biliran Province State University

Expected: May 2026

Bachelor of Science in Computer Science

- Relevant Coursework: Data Structures & Algorithms, Artificial Intelligence, Database Systems, Software Engineering
- Artificial Intelligence (Python), Web Development (JavaScript).

TECHNICAL SKILLS

Programming Languages: Python, JavaScript, TypeScript

Frameworks and Tools: Django, React, PostgreSQL, MySQL, GitHub Actions

Concepts: Data Analysis, Data Cleaning, Machine Learning, Full-Stack Development
